INTRODUCTION

Aaron Hadlow and Flexifoil present the next step in the HADLOW series. Having revolutionised the kite in the sky, Aaron has focused his attention on bringing his skills and expertise to the kiteboard market.

Having worked alongside the late, great Colin McCulloch on his way to the achievement of 5 consecutive PKRA World Championships, Aaron has developed a freestyle board with unrivalled proven success.

THE UNIQUE FEATURES

"This board is the shape I worked on together with Colin McCulloch over the years that helped me to achieve 5 world championships. Now I have the chance to share this great, comfortable ride with the rest of the world. It's unique flex and rocker line combined with a new innovative base shape that works together producing amazing performance for the best of riders and a comfortable, easy ride for any one just wanting to cruise"

Innovative Rocker

The innovative rocker on the freestyle board is built in three stages down the centre line, with a normal smooth rocker line on the rails. This innovative base shape creates a concave in the center and allows you to add more rocker into the board whilst still keeping its speed, effectively creating a fast, smooth ride with good grip and soft landings.

Honed tips to maximise performance

The width and flexibility of the tips have been designed and perfected through competition to sink the tail effectively and create maximum pop.

Premium Construction

The Freestyle board has been developed in production to the same exceptional standards by the world's most premium snowboard manufacturers.

At Flexifoil we only team our very best designers with the very best manufacturers to ensure we're creating the world's greatest products.

The board also offers exceptional flex characteristics, but thanks to our production techniques and high-grade materials you can be sure that the board can take the punishment of a world champion.

Feeling and Performance

The Freestyle board offers performance suitable for all levels of competent rider, from intermediate right up to professional. For the very best, it is the ideal tool for full on freestyle, whereas lesser skilled, but confident riders, will find it perfectly adaptable for learning jumps and tricks. Offering an ultra-smooth ride, but maintaining high-end performance, the Freestyle board is comfortable in choppy conditions and great in flat water, with an ultra-grippy base even in high winds. On launch from the water it gives lots of pop, essential for Aaron's signature freestyle and powered tricks, whilst on landing it is solid and easy to control.
